(54) Title: SAW BLADE

(57) Abstract: A saw blade (10) has teeth (1) grouped with varying shapes or other characteristics, such as composition. Each tooth has a root and a head separated by a transition region forming a neck. The roots may be oversized in relation to apertures or slots preformed in the strip (10), so that the teeth displace and deform the material of the strip (10), as they are forced into the position shown. They may then be fixed in position by brazing.

WO 2005/005086 A1

SK, TR), OAPI (BF, BJ, CF, CG, CI, CM, GA, GN, GQ, GW, ML, MR, NE, SN, TD, TG).

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
